RESOURCE REPORT 12 – PCB CONTAMINATION

SUMMARY OF FILING INFORMATION	
INFORMATION	Page Number(s)
Report Requirements <input type="checkbox"/> 1. For projects involving the replacement or abandonment of facilities determined to have PCBs, provide a statement that activities would comply with an approved EPA disposal permit or with the requirements of the TSCA. (§ 380.12(n)(1)) <input type="checkbox"/> 2. For compressor station modification on sites that have been determined to have soils contaminated with PCBs, describe the status of remediation efforts completed to date. (§ 380.12(n)(2))	 <p style="text-align: center;">Not Applicable</p> <p style="text-align: center;">Not Applicable</p>

Downeast LNG proposes to construct and operate a liquefied natural gas (LNG) import terminal on the banks of Passamaquoddy Bay on land located in the Town of Robbinston, Maine. The Project will consist of off-shore facilities for unloading LNG carriers, and on-shore facilities for storing up to 160,000 cubic meters (m³) of LNG, vaporizing the LNG, and sending out the natural gas at a baseload rate of 500 million standard cubic feet per day (mmscfd), with peaking capacity of approximately 625 mmscfd. Upon vaporization, the natural gas will be sent via an approximate 28-mile pipeline (up to 30-inch diameter) to the interstate natural gas pipeline system of Maritimes and Northeast Pipeline (M&NP) at its existing compressor station at Baileyville, Maine.

There will be no replacement or abandonment of any existing piping or equipment that has been in contact with PCBs, and there are no compressor stations on sites determined to have soils contaminated with PCBs. Therefore, completion of this section is not necessary. 18 C.F.R. § 380.12(n) (2005).
